

Jort de Boer

Game Developer | (Embedded) Software Engineer

boer.jort.edu@gmail.com | jortdeboer.me | Gelderland, Netherlands (NL)

About me

I am a Computer Engineer student with a passion for programming, automation and the interaction between hardware and software. I primarily focus on efficient programming in C and C++, with a particular interest in algorithm implementation and optimization as well as memory management. I enjoy tackling complex technical challenges and developing practical, efficient solutions, particularly in embedded systems and software development.

Beyond programming, I am driven by curiosity and creativity. My other interests include game development, PC building, traveling and solving puzzles. My projects and hobbies reflect my enthusiasm for technology, my eagerness to learn and my ambition to continuously improve my skills.

Education

University of Applied Sciences Utrecht
Bachelor Computer Science (HBO-ICT)
- Sep. 2019 - present

Minor in Finland
Game Development
- Aug. 2024 - Dec. 2024

Niftarlake College
HAVO Science and Health
- Sep. 2013 - Jun. 2019

Skills & Tools

C++ | C | Python | Assembly | JavaScript | HTML | CSS | Excel | Bash | Unity

Highlighted projects

Symbolic

C++ | Python | Assembly

Abstract syntax tree (AST), lexer, parser, compilation, Turing Complete, functional programming.

Super Hotline (Game)

C++ | C

Game Development, game loop, sprites and textures, 2D graphics engine, music.

Custom ROM for the Fairphone 4

C | Bash

Android development, bootloader, kernel and user space restrictions.

Go(moku) AI

Python

Algorithms, Monte Carlo Tree Search.

ESP and NRF modules

C++ | Assembly

Resource management, wireless communication, low level programming, interrupts.

Grids & Pixel Conquest

Unity | C++

Multiple games made using Unity and custom art during the minor game development in Finland.
